

## SUMMARY:

The Pasha Fund was established nearly decade ago to bring computers and the internet to 210 communities outside of the capital city. These “digital villages,” it was hoped, would bring jobs and development throughout the country, and relieve the overburden of Nairobi. The program has had some struggles since its initial funding. Roughly one third of the planned 210 centers were brought online. As we have downloaded the latest data from Kenya Open Data, there are only records for 32 of the centers. It is hoped that by making the status of the Pasha program readily available to the public, issues could be resolved and the intent of the program may be forwarded spurring an improved economy in the decades to come.

What do I want to get out of this project?

- The ability to present the data in a clear, and useful manner providing insight to areas that may not have been noticed before.
- Provide a base map for those with an interest in monitoring the Pasha Center Program.

What do I want the user to get out of the project?

- The user should have access to data presented with a geospatial reference when possible. (see the locations of Pasha Centers)
- An efficient experience
- An understanding of the data presentation \ enlightenment
- The ability to observe any gaps or clusters of Pasha Center service areas.
- Monitor the status of the Pasha program (decline / recovery.)
- Independent auditors could use the project as base map
